

Asset Keeper Pro - Asset Tracking / Construction in Progress

Asset Tracking / Construction in Progress

Asset Keeper Pro has two added features that you may find beneficial; Asset Tracking and Construction in Progress.

Asset Tracking provides additional fields for tracking assets; type, location, assigned to, date assigned, and asset status.

Construction in Progress allows you to enter costs (materials, labor, etc), for assembled or constructed assets. Once the asset has been completed you can activate it and the total cost will be transferred to the depreciable cost field.

Both options are enabled from the Client Information screen, located off the File menu.

The screenshot shows a software window titled "ABC Computer Consultants, LLC - December 31, 2013 - Client Information". The window has a menu bar with "File", "Edit", and "Help". On the left is a "Sections" sidebar with the following items: General, Methods, Calculations, Account Setup, Monthly Depreciation, Screen Prompts, Duplicates and Auto-Increment, Report Options, Folders, and "Asset Tracking / Constr in Progress" (which is highlighted). The main area contains the following text: "Mark the check box below to enable Asset Tracking or Construction in Progress (CIP) for this client.", "Construction in progress is a way to accumulate costs for assets being assembled or constructed.", and "When enabled, you will be able to access the appropriate TAB on the Add / Edit screen." Below this text are two checkboxes: "☐ Enable Asset Tracking for this client?" and "☐ Enable Construction in Progress (CIP) for this client?". At the bottom left, there are two fields: "Created" with the value "5/13/2014 - 10:53 AM" and "Last Modified" with the value "5/13/2014 - 11:04 AM". A "Close" button is located at the bottom right.

Asset Tracking / Construction in Progress

If Asset Tracking and Construction in Progress are not enabled, those options will be grayed out on the Asset / Edit screen and not accessible.
